

Strategy	Hardware	Software
Consolidation	Consolidate through virtualization and reduce the number of new servers in a refresh effort.	Find unified management software that encompasses your physical and virtual infrastructures
Technology Refresh	Employ energy-efficient servers to replace aging, inefficient equipment and reduce your power consumption & cooling requirements	Tackle the demands of web scale, databases, ERP, CRM, and business application with stable, secure open source tools and applications
Storage Systems	Reduce costs, escape proprietary lock-in through storage built from industry standard components and open source software	Answer and address your storage performance and utilization questions with advanced analytics and a robust protocol suite
Cloud Computing	Prepare for cloud computing with compute, storage and networking systems that integrate with systems from all of your vendors	Prepare for cloud computing and reduce TCO of your IT infrastructure and operation applications with SAAS delivery model
Green Initiatives	Save money and be eco-responsible. Reduce operating costs, power usage and heat output	Discover and use tools to help you bring new efficiencies out of old and new data center
